<http://romaricp.github.io>

Currently I'm traveling around the world since 6 months and I decided to lay down my hat in New Zealand for a minimum of one year. Passionate about web development since I'm 18 years old, I like to be a source of proposals and work on large projects. Daily, I like learning new development technical and **I am especially passionate about the Symfony Framework !**

EXPERIENCES

Lead Developer

Eolas Business & Decision - Grenoble (France) - 2015 - June 2016

Company specializing in creation of public websites, we made websites of all France's cities with Symfony2 Framework. I participated to make many UX prototypes design, brainstorming for new project,.. I like developping new ideas with new technologies.

Project Manager Technical

Dredd - Grenoble (France) - 2013 - 2015

Company specializing in e-commerce websites, we made only projects with Magento CMS. I was the project manager of all the development team . In contact permanent with our customers, I made the connection with the development team to wrote technical specifications.

Assistant Project Manager

Atipik - Marseille (France) - 2012

Company specializing in a retargeting system to work with our BtoB customer. My first job as project manager and where I learned Symfony2. I worked on the statistical part of the company software, to be as clear as possible and faster.

PERSONNALS PROJECTS

Let's get lost

Travel for one year around the word

I decided to quit my job just for one year to discover other cultures and landscapes. Hiking and photography enthusiasts I decided to start my travel in Canada to go down to Patagonia ! This travel it's chance to share my pictures and promote my other web service : Travelgram. During my travel I did Wwoofing in many countries to learn more about permaculture and vignoble and improve my English and my Spanish. All my travel's itinary and my pictures are available here : <http://letsgetlost.travelgram.co>

Travelgram

Developer Backend / Admin system

I built this new web service with 3 others friends, to allow people to share their adventure during their travel. During this project I was the backend developer, so I parameterized all the web server and I coded all the API (Doc is available here). We worked in a team with our GIT repository, we plan our meeting every week to be sure there are no major issues during the development. All this application is founded on the Instagram's API, so I optimised a class to use this API which is now open-source.

Freeline Skateshop

Co-founder / Developer Backend

I created this company with a friends 6 years ago. In the beginning we created a association but that was an immediate success, so we decide to built this company to sell our products : Freeline Skates ! We felt the potential of this product in France, so we launch our business. Now we work with China to receive our goods, and this business grow up every years. I coded this website with Magento CMS and optimised as far as possible, because I know Magento's performance problems.

SKILLS & PROFICIENCY

- **Development:** PHP 5&7 / MySQL / MongoDB
- **Environment :** LAMP / Git / SVN / Docker
- **CMS :** Magento / WordPress
- **Framework :** Symfony 2&3 / jQuery
