<http://romaricp.github.io>

For the last six months I have been travelling around the world and decided to lay down my hat in New Zealand for a year or more. Passionate about web development since 18 years of age, and **especially on the Symfony Framework**, I would like to offer my expertise and work on large projects. I continuously keep my knowledge up to date.

EXPERIENCES

Lead Developer

Eolas Business & Decision - Grenoble (France) - 2015 - June 2016

EBS is a company that specialises in the creation of Public Service websites. We developed and launched websites for many of France's largest cities on the Symfony2 Framework. I participated in making many UX prototype designs and in brainstorming for new projects. I like developing new ideas using new technologies.

Project Manager Technical

Dredd - Grenoble (France) - 2013 - 2015

Specialising in e-commerce websites, we only managed projects under the Magento CMS. I was the project manager of the whole development team. In constant contact with our customers, I was the liaison between the development team and our clients. This included writing technical specifications. I also implemented a new project management system for an off-shore team.

Assistant Project Manager

Atipik - Marseille (France) - 2012

Entirely dedicated to Retargeting Systems, Atipik works on a BtoB basis. In my first job as Project Manager I was introduced to Symfony2. I worked on the statistical part of the company's software with the objective of making it as clear and efficient as possible.

PERSONNALS PROJECTS

Let's get lost

Travel for one year around the world

I decided to quit my job just for one year to discover other cultures and landscapes. Hiking and photography enthusiasts I decided to start my travel in Canada to go down to Patagonia ! This travel it's chance to share my pictures and promote my other web service : Travelgram. During my travel I did Wwoofing in many countries to learn more about permaculture and vignoble and improve my English and my Spanish. All my travel's itinary and my pictures are available here : <http://letsgetlost.travelgram.co>

Travelgram

Developer Backend / Admin system

I built this new web service with three friends to allow people to share their adventures while travelling. As the backend developer, I configured the web servers and coded all APIs. We worked as a team with our GIT repository, we planned our meetings weekly to ensure that no major issue would interrupt the development process. The entire application was based on Instagram's API. I optimised a class to use this API which is now open-source.

Freeline Skateshop

Co-founder / Developer Backend

I created this company with a friend six years ago. In the beginning we started as an association which was an immediate success. We felt that the potential of this product in France was high. So we decided to launch a business to sell our products : Freeline Skates! Now we have them manufactured in China and the business is growing year after year. I coded this website with the Magento CMS and optimised it as much as possible, as I am aware of Magento's performance issues.

SKILLS & PROFICIENCY

- **Development:** PHP 5&7 / MySQL / MongoDB
- **Environment :** LAMP / Git / SVN / Docker
- **CMS :** Magento / WordPress
- **Framework :** Symfony 2&3 / jQuery
